## SORCERER

### Newsletter

The Toronto Sorcerer Users' Group was founded in the Spring of 1979, a handful of willing and eager to learn members.

This newsletter shall at all times keep in mind the goal at its conception. To spread the seeds of knowledge.

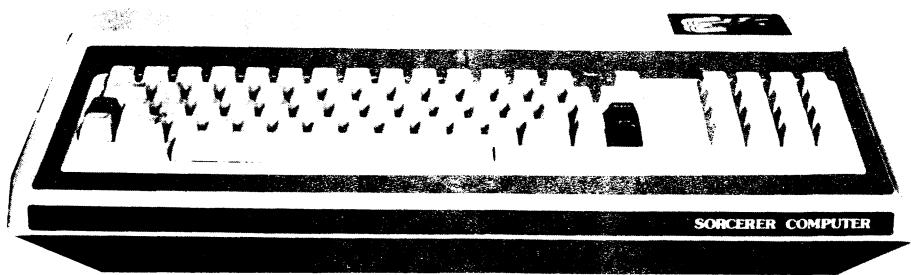

Articles printed in this newsletter shall be free for all Sorcerer Users' groups to reprint or comment on as they see fit.

Articles submitted for this newsletter must be in no later than the beginning of the 1st of every month.

February 1981 ISSUE

#### TABLE OF CONTENTS

1. - PREVIEW
  - REVIEW TRS COLOUR COMPUTER
  - LATEST RUMOURS
  - EXCERPTS FROM LIFE
2. - TIDBITS
3. - CP/M SECTION:
  - EXIDY 19K EXTENDED BASIC (review part 1)
  - HEY EXIDY!!
4. - SORCERER TECHNICAL TIPS
  - EXCERPTS FROM LIFE continued
5. - PIRANHA (game)  
ASM LISTINGS (partial this issue)
7. - MEMBERSHIP APPLICATION FORM

Now for a preview of some of the topics we shall cover under the Heading of CP/M. We will endeavour to keep you informed on some of the newer software that is available to you.

Keep posted on the following:

1. Spellbinder I &  
Spellbinder II (with 50K vocabulary)
2. EXASM (Exidy Z80 Assembler Disk ver)
3. EXBAS (Exidy Disk Extended Basic)
4. Wordstar (word processor)
5. Disk oriented Smart Terminal
6. MBasic & BASCOM Compiler
7. SID (Z80 DDT for CP/M)
8. CP/M users group library programs
9. Micropolis Basic
10. Exidy version CP/M
11. Exidy 19K Extended Basic
12. Vedit
13. Disilog
14. 'C' Language

---

#### Review: TRS colour computer.

At the last computer show held here in Toronto I happened to take a sideways glance at it. Don't worry -- you really didn't miss much. Resolution (let's just say) maybe Atari video games package for your colour T.V. would be a better idea, a little less expensive with more frills. I don't think that a person could sit down for any length of time and look at a colour screen without getting eye strain. Maybe I'm wrong about it. I certainly would.

#### LATEST RUMOURS

Exidy has rumoured that the SORCERER III is on its way. A full fledged disk system. Alas a 10K\$ proposition though. Also via the grape vine reports that Hayden Publishing will possibly be sole outlet for ALL Exidy Software!!!??#\$%&\*.

via: Ralph La Flamme  
Sect. Sorcerers Apprentice

#### EXCERPTS FROM LIFE

Does anyone want to know a neat way to blow up the Sorcerer? Does anyone have \$1500 to spare? Well, listen up. This is a tale of one poor jerk that was hit by everything Murphy had to throw at him.

It all started sometime in the late Summer of 1980 when I finally got my whole system up and running together. The hardware consisted of one Sorcerer with Basic Rom Pac, an S-100 expansion unit, a dual Micropolis floppy disk drive, a cheap tape recorder, and a \$100 B/W TV converted to be used as a video. The TV was the problem. See...it wasn't isolated. There was a small L.E.D. that was used to test for the proper polarity before I hooked it up to the computer.

When I tested the TV for proper polarity and hooked it all up, I noticed the display on the screen started to go haywire. I later determined that this was due to the effect of the S-100 box on the un-isolated TV, but at the time I thought it may have been the wrong polarity. So I switched polarity by reversing the direction of the TV power plug. I was wrong.

continued Pg 4

## TIDBITS

- 1 For those of you with Sorcerer Software manuals; there is an error on page 12 under 'cursor positioning' ITEM # 6. Change 1BE to read 18E.
- 2 Have you ever come up to a Sorcerer and wondered if a program is loaded into it? There is an easy way to find out. In the monitor mode type 'GO E6DE'. See what happens. This won't affect the program in any way.
- 3 Here is an easy way to clear the memory from top to bottom. Enter '0' @ 0000H, then type in the Monitor command 'MO yyyy xxxx 1 (cr)' where xxxx is the highest ram address UP TO WHICH you wish to clear. The 'yyyy' is the start address. Be careful, however, not to overwrite the monitor stack, which resides just below the top of ram.
- 4 For those of you who are newcomers to this computer. Basic warm starts are done by depressing the TWO RESET KEYS while you press 'Control C', 'Escape' or 'Run Stop'. Be sure, however to RELEASE the RESET keys FIRST-FIRST-FIRST-FIRST-FIRST. Just thought I would stress that point a little.

by: Dereck Gomes

- 5 Did anyone ever want reverse some or all of the graphic characters say at FC00 to FDFF. Here is a very small machine language program that can be located anywhere in memory and a USR(X) call to it will do the trick.

```
FD E5 F5 C5 D5 E5 11 00 FC 21 00 FC 1A 2F 12 13
23 3E FE BC 20 F6 E1 D1 C1 F1 FD E1 C9
```

This is called Bit Manipulation. See how fast this is.!

- 6 The next is being able to clear your video screen or just a part of it without damaging your graphic character set @ FC00.

FROM	TO	TO
E5 F5 21 80 F0 36 20 23 3E F5 BC 20 F8 3E 80 BD		
20 F3 F1 E1 C9		

- 7 'LOG A BASIC PROGRAM' Should anyone desire to have a BASIC program written in Standard ROM PAC Basic come up running, then follow this procedure:

ENTER Line # 0`REM this must exist

Find the end address of your basic program (i.e.: at least past it). Now enter the Monitor and SE F=40 (CR) ,SE X=C858 (CR), Then SA name 1D\$ xxxx where (xxxx) is the end of your basic program. In saving the program this way all you have to do is LOG when loading.

- 8 CLEAR A,B (A) Represents the amount of string space  
(B) Represents TOP OF MEMORY POINTER

i.e.: CLEAR 100,6000 Sets string space to 100 and sets top of memory to 6000.

by: H.A. Lautenbach

## CP/M SECTION

### Exidy 19K EXTENDED BASIC REVIEW

Let's take a quick look at the NEW Extended BASIC package that is begining to look good. This is primarily the Microsoft version of disk extended basic 5.0, without any disk functions. We have not had time to explore all of the commands yet, but will cover them in following issues. Here is a summary of some of the commands that will be new to you.

CALL	DEFINT	FIX	HEXS	CDBL
DEF\$NC	EQV	CSNC	DEFSTR	ERASE
IMP	CINT	CURSOR	DELETE	ERL
INKEY\$	LINE	AUTO	ERR	BAUD
EDIT	ERROR	LLIST	DEFDBL	ELSE
LPOS	NULL	TROFF	TRON	LPRINT
SWAP	WEND	OCT\$	RESUME	WHILE
USING	WIDTH	SPACE\$	XOR	RANDOMIZE
VARPTR	RENUM	SERIAL	MOD	OPTION

These are the commands that are in addition to what you are accustomed to in the ROM PAC BASIC. There are just a few things I would like to mention. Your old programs are not 100% compatible with the new basic and further that conversion programs are necessary so that you may even attempt to run them. The main difference is in the manner which the program gets stored - in ASCII not tokens as was the previous case. There are also routines so that these programs can be saved on disk, later run using MBASIC or EXBAS.

This is certainly worth investing in because of it's compatibility with disk basic. Caution though some of the commands are not supported in MBASIC nor the Compiler BASCOM.

by: H.A. Lautenbach

Well it seems that the Sorcerer Clubs are getting bigger and bigger every year. Hopefully in our neck of the woods too. Maybe some of the local computer "merchants" will take the hint and start carrying it again. It seems that in the past there has not been too much response from Exidy in the way of the following.

- (a) Faster delivery of equipment
- (b) Support at the local Computer Show
  - (everybody and their grandmother
  - comes to it - Ohio Scientific -Texas Instruments
  - Apple - Radio Shack

By the way Radio Shack did such a good job on Toronto that I'd hate to think that there are that many unfortunate people all around us. Did you know that their CP/M operating system is not just a standard system? It seems that even the information on disks cannot be transferred to let's say an 8" regular CP/M disk. If they keep going at their present rate it may be (us) who are running the non-standard format.

### HEY EXIDY

Give us some more support.

## Sorcerer Technical Tips

In the previous issue Cassette problems were discussed and hardware modifications. This time we shall finalize this with commenting on the recorders themselves. I have just recently treated a Sorcerer II for an ailment that is not uncommon to any of us. The procedure involved minor surgery and I might add, did indeed improve it's hearing ability. There were some further things that also had to be done. When previous tapes read produced errors, it became very evident that also the tape head alignment was slightly off.

Any persons contemplating getting any type of new recorder please keep in mind that it too could have alignment differences. The best solution is to buy one that has an adjustable head. This will insure that you should be able to read almost anybody's tape. With a little adjustment peak the audio output to its maximum. Don't forget to re-align it again back to what the previous setting was. This can be easily accomplished by inserting one of your old tapes that were written by you, and again peaking the audio to maximum. The adjustment screw is usually beside the tape head with a spring under it. Caution do not use a magnetic tip screwdriver that close to the magnetic read head.

### EXCERPTS FROM LIFE Continued from Pg.1

It was now time to look around for a service centre for my damaged equipment. I took my Sorcerer and expansion unit to the Home Computer Centre on Yonge Street. About a week later their service technician told me that the Sorcerer board seemed to be damaged badly enough to warrant my considering the purchase of a brand new board. As he put it, at \$35/hr. (his fee), it would probably cost more to go through it chip by chip and that maybe the Canadian distributors of Exidy in Calgary might be better equipped to do so than he was; so I got their number from The Computer Place on Queen Street and phoned them long distance. They told me that they had all the right equipment for the job and, sure, send them the computer. I did, and spent the next 3 months waiting to get it back.

What happened was that they did not even look at it but told me that it would be better to get a new board. So I phoned Exidy in California and they told me they could ship a new Sorcerer II board, minus the pluggable chips, for US\$500. By this time I wanted the Sorcerer II board pretty badly so I told Calgary to go ahead and replace the board with the new Sorcerer II and to send me back the old one (they wouldn't give me a dime for it). I then spent the next 3 months on their backs (long distance) just trying to get them to hurry up, as I was suffering from acute withdrawal symptoms.

Every time I called them, it seemed that the bill was slowly mounting. I learned that the Sorcerer II board needed a power supply board and was told that it would cost an extra \$150 or thereabouts. The final total turned out to be about \$950. I asked them to put it together and ship it to me pronto (I was afraid that if they had it any longer I would have had to sell my car to pay for it).

Then I turned my attention to the Micropolis disk controller card which I sent to the Computer Place on Queen Street. I was impressed with their speed in fixing it. I was also impressed with their price, but in a different way.

They needed a ROM chip and it turned out that Micropolis couldn't ship it in less than a month, so I borrowed a master from the Computer Place and got it copied through Active Components in 2 days. The final bill for fixing this board was \$343.65. This was mostly labour and the guy said it would have been little over \$100 if I had just had them depopulate and repopulate the entire board. With a bit of crying I got them to knock off two hours of labour, so that I only paid \$273.65. Still a lot, I thought (the parts only came to \$60).

Now the Expansion box. This also needed a ROM chip and here I made the mistake of getting Spectra in Calgary to order it from Exidy. It took another two and a half weeks and a few more phone calls to finally get it. The total bill for the Expansion Box repair came to \$277.70.

After the loud 'POP' was over; the smoke signal had dissipated; the flying I.C.s had landed; and the mad dash to unplug was completed, I sat there for about 5 minutes waiting for my heart and blood pressure to get their act together. Then came the time for the assessment of damage. It didn't look good. I had blown my Sorcerer board, my S-100 board, and my disk controller board. The TV was fine!! I spent \$60 and got it isolated. (For those of you "I TOLD YOU SO"s who thought I should have had a proper video monitor in the first place, let me say that I don't like the display on those monitors. All the capital letters are square and look alike; especially the Hitachi job).

#### 1980 was definately a bad year for me.

What did I learn from all this? (1) Never order a ROM chip from the manufacturer if you can help it. It's much cheaper and faster to have a PROM programmed up. (2) If the extent of damage to a board is uncertain, have the serviceman replace all the chips. Again, it's cheaper and faster. (3) Try not to deal with an out-of-town repair shop. You just can't visit them as you can a local company and the phone calls would kill you.

An interesting aside to this was that my Basic ROM PAC did not work with the new Sorcerer II board. I phoned Exidy and they said there were no changes in design between old and new ROM PACs and they suggested I contact my Canadian Distributor. Well I did and they exchanged it free of charge. Exidy, by the way, charges \$50/hr. for service; an amount that I suspect is more punitive than anything else, if you ask me. They mean that you should not call them for service.

All in all a very expensive lesson. If I knew then what I know now I think that I could have cut the total bill by a full third. If Spectra Electronic Services of Calgary, our sole Canadian Distributors of Exidy computer products, wishes to do business with Toronto then they will have to set up a dealership here. Calgary is too far away to be worth the while to deal with and they drag their feet too much. What was worse was that I spent over \$150 in long distance phone calls before I found out that they had a toll free number.

I am thinking of selling my old board. Anyone interested in a slightly used version of the Sorcerer I board? Proms will be provided in any one of four possible configurations: Burned in; Burnt out; Burnt up; or Burnt down! You can't get this deal in any store, so order now. The sucker...er..prospective buyer, can contact me through the good offices of the Sorcerer Users Group of Toronto.

As librarian, it is my duty to keep records; and I think I hold the dubious distinction of being the first sop to blow his entire system (with the exception of the \$30 tape recorder). If anyone has had any similar problems with their system, let me know. Us victims of Murphy's Law have to stick together.

Will I do it again??? Stay tuned, folks!

by: Dereck Gomes

## PIRANHA

If any of you Sorcerer friends have played Martian Invaders, then this PIRANHA game is a must for you! The following is a brief summary of the game listed on the following pages in Hex and Mnemonic form.

The screen formats to a large Rectangle with you, the swimmer, right in the center, and the PHASE level and SCORE at the base of the screen. Then from the bottom piranhas start to move vertically up to the top of the screen, some slowly, but others faster --- then one is right in line with you! If the piranha gets you, you're finished! But by using the numeric arrow keys you can avoid being devoured! Now with special attention to your movements you are able to avoid the piranhas coming up from the bottom of the screen. The intention of the game is to score as high as possible without being eaten. This is accomplished by moving from one side of the screen to the other side, as many times as possible, without running into a hungry piranha along the way.

When you accomplish this in Phase 0 you score 50 points for each pass. As the Phases increment by 1, this score rate for crossing the screen from border to border will increment accordingly. At Phase 2 your scoring is 100 per pass but the piranhas begin to increase in numbers from the bottom of the screen with an additional problem. Instead of just going up the screen some begin to move sideways toward you! It now becomes more and more difficult to find a free passage across the screen. At Phase 4 the problem becomes a little bit more hairy! -- because the piranhas have now decided to appear from the top of the screen moving downwards and occasionally begin to move sideways towards you and start hemming you in. Occasionally two piranhas will collide and fight it out. This obliterates them both from the screen. At Phase 5 scoring increases to 180 pts. per pass, but it becomes more and more difficult to cross from one side to the other. You manage to survive to reach Phase 6 and there are approximately 20 piranhas on the screen with very few openings available. At Phase 7 they are all moving towards you with great vigor!! More collisions appear between hungry piranhas and scoring is up to 250 pts. per pass.

With less and less chances of crossing the screen a break occurs. There are now only 6 piranhas on the screen. The score climbs to 28,000 and you are a bag of nerves! The screen soon fills up with more piranhas - it's just uncanny and impossible to watch all the piranhas at once to see in which direction they are all moving.

Phase 8 has now been attained. Ten minutes has gone by since you started. Just then a piranha came from the side right adjacent to your location. You were only inches from being eaten!!! Phase 9 finally has been reached. The score is now 42,000 Ooooooooohhhhhh!!!!!!..... a piranha got me with a score of 42,044 High score to date has been achieved by Tony Lautenbach, the co-author of this newsletter, with a score of 94,000.

by: Tony Bagshaw

# SORCERER USERS' GROUP (TORONTO)

## Membership Application Form

covering Jan. to Dec. 1981

Membership to the group is not restricted to the TORONTO area. All persons willing to participate are invited to join.

As a member of the Sorcerer Users' Group (Toronto), I enclose the annual membership fee and agree to the following Terms.

1. That I will not, without the authorization of the board of directors, represent myself or take any action as agent, or representative or spokesperson of the group.

2. That I will not use any software obtained from the SUGT library for any commercial purpose or financial gain. The library shall be available to me should I wish to obtain programs donated by other members. These programs shall not be distributed without the owners consent and/or the consent of the board of directors.

3. That I have the right to vote for the officers and directors of the organization at the annual general meeting.

4. That any breach of the above conditions and any other restrictions that the board of directors may invoke in the future on my part may result in suspension or termination of my membership without refund.

### Annual Membership Rates:

Canadian - \$ 10.00      U.S. & Foreign \$ 15.00 (Canadian Funds)

The SUGT program library is available to all members in the following manner.

- (a) Supply a blank C60 cassette at a meeting. It will be returned the next.
- (b) Send in your blank cassette plus \$ 1.50 for postage and it will be mailed back to you. Or you may send \$3.50 and we shall supply the cassette.

All issues of PORT FE shall be mailed first class, in the case of non local issues, they are mailed via Air Mail. Program cassettes shall be returned via Air Mail.
