

In a very QRM quiet environment is whats in the background noise even decodable. Aerial is the self-made and very QRM-poor (high-dBm) aktive whip. NON directional, gain = 1! Decoding with an OpAmp RTTY-decoder 170Hz shift, cpu is an old 386SX with Hamcom 3.0.

Some playing around with NAVTEX (518KHz) in dec95-jan96 gave the following results (a résumé taken from lots of logs):

Look at the following logs: Lots of DX at the same moment, from Newfoundland / Canada to Haifa / Israel.

All within the hour. Extraordinary nice results. All the misprints are caused by the fact that I received too much... all stations together at the same time.

--- log opened Fri Oct 04 1996 23:20:33 UTC ---
